

Westravelle Analytical Ltd, a Tarnovell company

WA/2024/314 EP-7 closeout

DRAFT | Unreleased | Work stopped

Client: Esmervane Pharmaceuticals

LIMS: WST-24-009763

Prepared by: Dr A. Penrose

Draft date: 03 Dec 2024

1 Status and initial analytical observation

Esmervane Pharmaceuticals terminated the EP-7 formulation following a clinical strategy change and authorised closure of the remaining Stability pulls. This draft records the initial observation and the boundary of work performed under WA/2024/314. It has not passed the report release gate and is not a final stability report.

Table 1 Initial pull only; assay as percent label claim and impurities as area percent

Condition	Timepoint (months)	Assay (% LC)	Imp A RRT 0.86 (%)	Imp B RRT 1.12 (%)	Total impurities (%)	Water KF (% w/w)	Result
25 °C/60% RH	0	100.4	0.04	<0.05	0.13	1.2	Complies

Specification: assay 95.0-105.0% LC; Imp A (RRT 0.86, specified) ≤0.50%; Imp B (RRT 1.12, specified) ≤0.30%; any unspecified impurity ≤0.20%; total impurities ≤2.0%

The initial assay was 100.4 percent label claim. The observation applies to the initial pull only. It does not establish change with time, comparability between conditions or a shelf-life interval.

Cancellation is a programme decision and shall not be recorded as analytical compliance at unperformed timepoints.

2 Protocol identity and chronology

Table 2 Protocol identity

Item	Entry
Protocol	WA/2024/314
Accession	WST-24-009763
Client	Esmervane Pharmaceuticals
Material	EP-7 capsules
Programme	ICH chamber programme
Protocol lead	Alice Penrose
Stability coordination	Leon Wu
Method oversight	Saira Mahmood
Start	29 Oct 2024
Interim checkpoint	19 Nov 2024
Final completion	Not issued; protocol cancelled

Start and interim dates identify the administrative chronology. They do not by themselves demonstrate a storage interval or a completed pull. Executed observations must remain linked to the batch card, chamber entry and sequence sheet.

This draft was opened on 03 Dec 2024 to preserve the cancellation boundary. The final report number and approval date have not been allocated.

3 Material custody and initial pull

EP-7 capsules were assigned to WST-24-009763 for the ICH chamber programme. The accession identifies the material trail; it does not replace stability lot identity, container identity or placement location on the batch card.

The initial observation is the only numerical pull represented here. Receipt, preparation and allocation references remain to be collated before a controlled archival closeout can be signed.

Table 3 Custody references

Custody element	Closeout entry
Stability lot	[TBC: signed batch-card identity]
Container allocation	[TBC: allocation reference]
Chamber placement	[TBC: placement inventory]
Initial retrieval / preparation	[TBC: signed entry]
Remaining material	Disposition not reconciled in this draft

The cancellation instruction does not mark containers as destroyed or returned. Physical disposition requires its own authority and signed custody entry.

4 Analytical documentation and release boundary

Assay and related-substances observations belong to the applicable sequence sheet and raw-data trail. Saira Mahmood is the technical closeout contact. Preserve the method version used at execution rather than substituting a later template revision.

Table 4 Evidence index

Element	Draft status
Method / revision	[TBC: executed method]
Sequence sheet	[TBC: initial sequence]
System suitability	[TBC: acceptance review]
Raw-data location	[TBC: controlled reference]
Independent check	Signature not incorporated
Report release gate	Not completed

The initial entry does not certify that calculations, system suitability and traceability have been checked for report issue. No trend fit, degradation rate or projection is calculated from this initial observation.

5 Cancellation instruction

Esmervane Pharmaceuticals authorised closure of remaining pulls after terminating the formulation for a clinical strategy change. This stops the scheduled analytical programme. It neither changes the initial observation nor creates a final stability conclusion.

Leon Wu is to retain the schedule with cancellation visible. Outstanding retrieval entries must be distinguished from completed pulls; cancelled entries must not receive passing results.

Table 5 Cancellation boundary

Instruction element	Entry
Reason	Formulation terminated after clinical strategy change
Remaining pulls	Closure authorised by Esmervane Pharmaceuticals
Correspondence	[TBC: cancellation instruction]
Instruction date / recipient	[TBC: correspondence entry]
Disposal authority	Not established in this draft
Scientific conclusion	No final stability or shelf-life conclusion

Outstanding: attach the instruction and reconcile its scope against chamber inventory. Material-disposition questions remain open.

6 Unperformed timepoints and schedule closure

Scheduled pulls after the initial observation remain unperformed in this closeout. Identify them as cancelled following the client instruction, rather than missing measurements suitable for interpolation.

Table 6 Programme closure

Component	Execution status	Closeout action
Initial pull	Initial observation retained	Link signed evidence
Subsequent planned pulls	Not performed following cancellation	Annotate schedule with instruction
Final assessment	Not performed	No final trend or shelf-life assessment
Remaining inventory	Open	Collate container-level disposition

Do not populate later timepoints from planning entries or carry the initial assay forward. The initial interval and condition remain the limits of the analytical statement.

Restarting testing would require a new written scope, confirmation of custody and assessment of intervening storage. It is not authorised by this draft.

7 Open closeout actions

Table 7 Unfinished actions

Action	Responsible function	Evidence required
Collate client instruction	Head of Analytical Services	Correspondence and scope
Reconcile containers	Stability Coordinator	Signed batch card and inventory
Index initial analytical evidence	QC Method Validation Lead	Method, sequence and raw-data links
Assess open departures	QA Officer	Deviation-note disposition
Determine archive release	Head of Analytical Services and QA	Approved closeout boundary

This register records unfinished work and does not certify completion. No recipient copy has been authorised. Retain this file in the unreleased location until evidence and disposition are settled.

QA review entry: [TBC]

8 Final stability conclusion

9 Approval and issue

10 Retained-material disposition

11 Working closeout note

03 Dec 2024 — Alice Penrose: initial result retained; cancellation scope to be attached. No final stability or shelf-life statement. TODO: Leon to reconcile the remaining chamber entries and
